Meniscus Repair Protocol

	Phase I: weeks 0-4	Phase II: 5-8 weeks
Weight-Bearing and Immobilization	 WBAT with brace locked in full extension Discontinue crutches as tolerated Brace locked in full extension while ambulating and sleeping but may be unlocked while sitting 	 WBAT in brace unlocked 0-90° when minimal edema, no extension lag, excellent quadriceps control, and quadriceps strength adequate for stable ambulation Discontinue brace when no extension lag, excellent quadriceps control, and quadriceps strength adequate for stable ambulation
Aerobic	• None	Stationary bike (low resistance)
Range of Motion (ROM) and Strengthening	 AROM and PROM 0-90° Emphasis on full-extension Heel Slides 0-90° Isometric quad sets Patellar mobilization Straight-leg raises (with brace until able to do SLR without extension lag) Ankle pumps 	 Continue exercises from Phase I Unrestricted AROM and PROM, however no bearing weight past 90° flexion Initiate step-up program Weight shifts Mini-squats Closed-chain knee extension Heel raises Hip and core exercises Proprioceptive training
Other	 Modalities as needed to reduce swelling and improve muscle recruitment Home Exercise Program (HEP) per discretion of Physical Therapist 	
Goals	Pain controlProtection of tissue healingMinimize joint stiffness	Regain quadriceps/VMO strengthRegain full ROMProprioception and balance

	Phase III: weeks 9-12	Phase IV: 13-20 weeks
Weight-Bearing and Immobilization	Progress to WBAT with unrestricted ROM	
Aerobic	Stationary bike Elliptical machine	Begin walk-jog-run progression
Range of Motion (ROM) and Strengthening	 Continue exercises from Phase II Unrestricted ROM Progressive squat program Initiate step-down program Leg press progression (body weight, two legs, single-leg, single-leg eccentric) Lunges (initially body weight only) 	 Continue exercises from Phase III Begin single-leg exercises Begin sport-specific exercises as progress allows Aquatic therapy permitted (flutter kicks only, no whip kicks)
Other	Modalities as needed to reduce swelling and for muscle re-education Home Exercise Program (HEP) per discretion of Physical Therapist	
Goals	Improve strength Improve proprioception and balance	Improve aerobic fitnessWork toward passing Leg Press Test and Single Hop Test

	Phase V: 20-36 weeks	
Weight-Bearing and Immobilization	WBAT with unrestricted ROM	
Aerobic	Continue walk-jog-run progression	
Range of Motion (ROM) and Strengthening	 Continue exercises from Phase IV Begin plyometrics and agility exercises after passing Leg Press Test and Single Hop Test Begin sport-specific exercises as progress allows 	
Other	Home Exercise Program (HEP) per discretion of Physical Therapist	
Goals	Work toward passing Leg Press Test and Single Hop Test Return to sport-specific activities
